IDENTIFICATION AND BADGING

Collaborative Fusion, Inc.™ (CFI) offers the CORES™ Identification Module as part of the CORES™ Response Management Platform providing a Commercial-Off-The-Shelf (COTS) identification card management system enabling a pre-incident or just-in-time solution for issuing full color photo identification badges. The CORES Identification Module supports existing federal ID and credentialing guidelines such as FIPS 201-1 and FRAC as well as agency-specific permanent identification credentials.

CORES™ Identification Module Features

The CORES Identification Module is designed to be your single solution for issuance of FIPS 201-1 and FRAC interoperable smart cards, cards with 1-D/2-D barcodes and/or magnetic stripes, asset tags, and RFID embedded cards. Using open standards, the CORES Identification Module is interoperable with other ID card technologies and with multiple reader systems. Identification cards can be produced using pre-existing identification such as drivers' licenses or passports, or data can be manually entered for each individual. The CORES Identification Module is also a scalable solution which can be used in both "on-line" and "off-line" modes.

Mobile Card Creation

The CORES Identification Module is available in a ruggedized fly-away kit which includes everything needed to issue identification cards to thousands of individuals. This single case includes a printer, identification card supplies, bar code scanner, smart card reader, and a laptop or PDA with all connections pre-wired. Simply connect to a power source or run off of the included batteries to begin producing identification cards.

Additional Key Features:

- Provides a flexible platform that creates and manages customized, high quality, identification credentials
- Integrates seamlessly with other CORES Platform Modules such as Responder Management and Incident Management to provide credential verification, personnel accountability, and resource tracking solution to individuals, teams, governmental agencies, and support organizations
- Interoperable with multiple printer types and vendors
- Includes high quality photos and customized layouts on ID cards
- Available as a bundled, field-ready package that includes all of the hardware, software, and supplies necessary to support rapid implementation into operational plans
